## **Adobe Captivate 7: The Essentials**

“Skills and Drills” Learning

Kevin A. Siegel

## Panning

Captivate's Panning feature is useful when you want to record something on your computer that is outside of the red Recording Area. If you enable Panning prior to recording and use Captivate's Automatic mode, clicking outside of the Recording Area forces Captivate to move the Recording Area and includes the area you clicked.

### Student Activity: Record a Demonstration that Pans

1. Start a web browser and navigate to **www.disney.com**. 
2. Create a Software Simulation.
  - switch to Captivate and, from the **Create New** area of the Welcome Screen, click **Software Simulation**

3. Select a screen area to record instead of a specific application.

- from the top of the control panel, select **Screen Area**

4. Specify a recording size.

- from the Set Capture Area to area, select **Custom Size**
- from the next drop-down menu, select **640 x 480**

5. Drag the red recording box to the **upper left** of the browser window and resize the browser window so it's about 30 percent larger than the red Recording Area.
